Farmindustria, the Italian association of pharmaceutical companies, will try to explore the main features and perspectives of Contract Development and Manufacturing Organizations (CDMO) in Italy. Pharmaceutical manufacturing in Italy is a leading sector, with CDMO playing an important part in this.

Although relatively young, Italian CMDO has grown fast during the last years; Italy now ranks first in Europe, with 1.5 billion euro production value.

A success story backed by a mix of reasons, ranging from increasing export capacity to high added value activities.
